

Connecting to the Office Simpro AI Tool

LAN Setup Guide for Coworkers (5 minutes)

What this is

We have set up an AI tool that lets you read and update Simpro data by chatting with Claude on your computer. This guide is for connecting to the version that runs on the office server. You do not need to install anything technical on your PC.

Before you start

You need three things:

- **Claude Desktop** installed on your PC. Free or Pro plan, both work.
- **Your own Simpro API key** (instructions in Part 1).
- **The connection details from IT** (Part 2): a URL and a personal access token.

NOTE. Connect to the office Wi-Fi or VPN before testing. The Simpro tool only works while you are on the Goldman network.

Part 1 - Get your own Simpro API key

Each person uses their own key so audit logs in Simpro show who did what.

1. Log into Simpro at **<https://goldmanplumbingservices.simprosuite.com>**
2. Click the gear icon (top right) -> **System** -> **Setup** -> **API Keys**

[Screenshot placeholder]

Simpro: System menu showing API Keys location

(Tayfun: paste real screenshot here. Right-click box in your PDF editor and replace.)

3. Click **Add**. Name it after yourself, e.g. *Jane Smith - Claude Desktop*
4. Set the linked employee to **your own employee record** in Simpro
5. Start with **read-only** permissions. You can add edit later.
6. Click **Save**. Simpro will show the access token. **COPY IT IMMEDIATELY** into a private note - Simpro shows it only once.

[Screenshot placeholder]

Simpro: API Key created, access token visible

(Tayfun: paste real screenshot here. Right-click box in your PDF editor and replace.)

WARNING. Treat the access token like your password. Never email it, paste it in chat, or share it. If it leaks, log into Simpro and delete it.

Part 2 - Get connection details from IT

Send your Simpro API key (from Part 1) to IT. IT will reply with two things:

- **Connector URL** - looks like `http://goldman-server.local:3001/mcp`
- **Your personal access token** - a long random string IT generates for you (different from your Simpro key)

NOTE. Why two tokens? Your Simpro API key stays on the office server (IT registers it for you). Your personal access token is what your Claude Desktop sends to prove it is really you. If you change PCs or lose access, IT just regenerates the personal token without touching Simpro.

Part 3 - Add the connector to Claude Desktop

1. Open **Claude Desktop** on your PC.
2. Click your profile icon (bottom left) -> **Settings**.
3. Click **Connectors** in the left sidebar.
4. Scroll down and click **Add custom connector**.

[Screenshot placeholder]

Claude Desktop: Settings -> Connectors -> Add custom connector button
(Tayfun: paste real screenshot here. Right-click box in your PDF editor and replace.)

5. Fill in:
 - **Name:** Goldman Simpro
 - **Remote MCP server URL:** the URL IT sent you
 - **Authentication:** choose **Bearer token** and paste the personal access token from IT
6. Click **Add**. Claude Desktop should say it connected successfully.

[Screenshot placeholder]

Claude Desktop: Custom connector form filled out, before clicking Add
(Tayfun: paste real screenshot here. Right-click box in your PDF editor and replace.)

NOTE. Custom Connectors require Claude Pro, Team, or Enterprise plan. If your plan does not show this option, ask IT for the alternative individual setup (Plan B) instead.

Part 4 - Test it

In Claude Desktop, type:

```
Use Simpro Plumbing to test the connection.
```

You should see something like:

"Simpro connection OK. Base URL: <https://goldmanplumbingservices.simprosuite.com>, Company ID: 4..."

If you see this - **everything works**. Try other prompts:

- *Use Simpro Plumbing to find customers named Goldman.*
- *Use Simpro Plumbing to find recent jobs.*
- *Use Simpro Energy to test the connection.* (if you also need Goldman Energy)

Safety - what is on and off by default

When you connect for the first time, Claude can **read** Simpro data (search, view) but cannot **change** anything. This is on purpose.

SAFETY. Writes (create, update) are off by default. To enable them later, ask IT - they will turn it on for your token. Even then, every write requires you to say 'confirm true' and Claude will show you what it is about to do before sending.

Common problems and fixes

Problem	Fix
Claude Desktop does not show the Goldman Simpro connector	Restart Claude Desktop completely - right-click the icon in the system tray (near the clock, bottom right) and click Quit . Wait 3 seconds, reopen.
Connector says 'connection failed' or 'cannot reach server'	Check you are on the office Wi-Fi or VPN. The server is only reachable inside Goldman's network.
Connector says 'unauthorized' or '401'	Your personal access token is wrong, expired, or has been revoked. Ask IT to regenerate it.
'Vendor order not found' or 'Customer not found' errors	You are probably searching the wrong company. The tenant has Plumbing (default) and Energy. Try saying ' <i>Use Simpro Energy to...</i> ' for Energy records.
Claude finds zero quotes for a customer that clearly has quotes	Claude searched the wrong field. Phrase it as: ' <i>Use Simpro to find quotes for customer [name]</i> ' rather than putting the name as a keyword.
Anything else	Send IT a screenshot of the error. Never include your access token in the screenshot.

If anything is unclear

Contact IT (currently Tayfun / Sinan). Send a screenshot of what you tried and what Claude said.

Never include your Simpro API key or personal access token in the screenshot - blur it or crop it out first.
