

# Goldman Simpro AI Tool

Individual PC Setup Guide (Plan B, ~15 minutes)

## How it works

The Simpro tool runs locally on your PC. Claude Desktop launches it as a small background process. It uses YOUR Simpro API key directly - no office server in between.

## When to use this guide

Use this only if the office server version is unavailable, or if you do not have Claude Pro/Team/Enterprise. Otherwise the LAN setup is much simpler - 5 minutes, no installation.

## What you need

- Windows 10 or 11.
- Claude Desktop installed (free plan is fine).
- Permission to install Node.js (you may need to ask IT).
- About 15 minutes.

## Part 1 - Create your own Simpro API key

1. Log into Simpro at <https://goldmanplumbingservices.simprosuite.com>
2. Click the gear icon (top right) -> **System** -> **Setup** -> **API Keys**
3. Click **Add**, name the key after yourself, link to your own employee record.
4. Start with read-only permissions for the first week.
5. Click **Save**. **COPY THE ACCESS TOKEN NOW** - it is shown only once.

**WARNING.** Treat the access token like your password. Never share, email, or screenshot it. If it leaks, log into Simpro and delete the key.

## Part 2 - Install Node.js (one-time)

1. Open **<https://nodejs.org>** in your browser.
2. Click the green **LTS** button on the left to download the .msi installer.
3. Run the installer. Click Next, Next, Install. Defaults are fine.
4. **Restart your PC** after the install completes.
5. Verify: open the Start menu, type *PowerShell*, press Enter, then type:

```
node --version
```

It should print something like v20.11.0. If yes, close PowerShell - Part 2 is done.

## Part 3 - Open the IT share folder

IT keeps the latest version of the tool in a SharePoint folder. On your PC, navigate to:

```
C:\Users\\GoldmanPlumbing\Goldman Plumbing Services\Energy - Documents\IT\SimProMCP
```

(replace <YOU> with your own Windows username, e.g. *jsmith*)

**NOTE.** If the folder does not exist on your PC, you do not have OneDrive synced. Open Microsoft Teams or your browser, find the **Energy > IT > SimProMCP** SharePoint folder, click **Sync**. Or just ask IT to share a copy directly.

## Part 4 - Run the installer

1. Open the SharePoint folder from Part 3.
2. **Double-click** the file named **install.cmd**.

**NOTE.** Windows may show a blue 'Windows protected your PC' warning. Click **More info -> Run anyway**. The script comes from your IT team - it is safe.

3. When asked for your **Simpro API key**, paste the access token from Part 1.
4. When asked which company, type **3** for both Plumbing and Energy (or 1 for Plumbing only, 2 for Energy only).
5. Wait about 30 seconds. The script copies the tool, configures Claude Desktop, and tells you it is done.

## Part 5 - Restart Claude Desktop properly

**WARNING.** Just closing the Claude Desktop window is NOT enough. You must **Quit** from the system tray.

1. Look at the bottom-right of your screen, near the clock.
2. Find the **Claude icon** in the system tray. You may need to click the small up-arrow to expand hidden icons.
3. **Right-click** the Claude icon -> click **Quit**.
4. Wait 3 seconds, then open Claude Desktop again from the Start menu.

## Part 6 - Test it works

1. In Claude Desktop, click the small **tools / hammer icon** near the message box. You should see two entries: *simpro\_plumbing* and *simpro\_energy*.

2. Type into the chat:

Use Simpro Plumbing to test the connection.

3. You should see something like: *'Simpro connection OK ... Company ID: 4 ...'*

4. Try the other one to confirm both work:

Use Simpro Energy to test the connection.

Should report **Company ID: 37**. If both work, you are done.

## More things to try

- Use *Simpro Plumbing* to search for customers named *Goldman*.
- Use *Simpro Plumbing* to find recent jobs.
- Use *Simpro Plumbing* to list line items for purchase order *[number]*.

## Part 7 - Turning on writes (later)

After a few days of comfortable read-only use, you can let Claude create or update Simpro records. Do this in two stages.

### Stage 1 - Dry run (safe preview)

Edit the Claude Desktop config and set `SIMPRO_ENABLE_WRITE_TOOLS=true` while keeping `SIMPRO_DRY_RUN=true`. From then on, write requests show you what would happen but do not actually send. If you are unsure how to edit the config, ask IT.

### Stage 2 - Real writes

Once you are confident, set `SIMPRO_DRY_RUN=false`. Real writes happen now. Start small - add a note to a test job before doing anything bulk.

**SAFETY.** Every write also requires *confirm: true*. If you forget, Claude returns a confirmation request instead of doing anything. Two safety layers, on purpose.

## Updating to a new version

When IT releases a new version, they will tell you to:

1. Open the SharePoint folder again.
2. **Double-click update.cmd**. It refreshes your local copy without touching your API key.
3. Quit Claude Desktop from the system tray and reopen.

## Common problems and fixes

| Problem | Fix |
|---------|-----|
|---------|-----|

|                                               |                                                                                                                                                                             |
|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Claude Desktop does not show the simpro tools | You did not fully Quit Claude Desktop. Right-click tray icon -> Quit. Wait 3 seconds. Reopen.                                                                               |
| '401 Unauthorized'                            | Your Simpro API key is wrong, expired, or was deleted. Generate a new one in Simpro (Part 1) and re-run <code>install.cmd</code> to update it.                              |
| '403 Forbidden'                               | The key works but lacks permission. Edit your API key in Simpro and grant the missing permission.                                                                           |
| '404 Not Found' on every request              | Wrong company. Goldman Plumbing = ID 4, Goldman Energy = ID 37. Try the other one.                                                                                          |
| 'Write tools are disabled'                    | Safety guard. Enable writes (see Part 7).                                                                                                                                   |
| 'Confirmation required'                       | Add <i>confirm: true</i> to your request, or tell Claude ' <i>...and confirm true</i> '.                                                                                    |
| 'Could not reach Simpro'                      | Check you can open <a href="https://goldmanplumbingservices.simprosuite.com">https://goldmanplumbingservices.simprosuite.com</a> in your browser. If on VPN, connect to it. |
| Anything else                                 | Send IT a screenshot. <b>Never include your API key in the screenshot.</b>                                                                                                  |

## Rotating or revoking your API key

Do this if your key may have leaked, or if you are leaving Goldman.

1. Log into Simpro -> API Keys page (Part 1, Step 2).
2. Click **Add** to create a new key, copy the new access token.
3. Re-run **install.cmd** from the SharePoint folder. When asked for the API key, paste the new one.
4. Quit and reopen Claude Desktop. Test the connection.
5. Once the new key works, go back to Simpro and **delete** the old key.

## If anything is unclear

Contact IT (currently **Tayfun / Sinan**). Tell them: which step number you are on, the exact error message, and your Windows version. **Never include your Simpro API key** in screenshots.
