

Connecting to the Office Simpro AI Tool

LAN Setup Guide for Coworkers (5 minutes)

How it works

Your Claude Desktop talks to the office server, the office server talks to Simpro using YOUR Simpro key. Simpro's audit log records you as the person who did each action.

Before you start

- **Claude Desktop** installed on your PC.
- **Claude Pro / Team / Enterprise plan** (Custom Connectors require a paid plan). If your plan does not show Custom Connectors, ask IT for the alternative individual setup.
- **Office Wi-Fi or VPN** connected. The server is only reachable on the Goldman network.

Part 1 - Create your own Simpro API key

Each person uses their own key so audit logs in Simpro show who did what.

1. Log into Simpro at **<https://goldmanplumbingservices.simprosuite.com>**
2. Click the gear icon (top right) -> **System** -> **Setup** -> **API Keys**
3. Click **Add**. Name it after yourself, e.g. *Jane Smith - Claude Desktop*.
4. Set the linked employee to **your own employee record**.
5. Start with **read-only** permissions. IT can grant edit later.
6. Click **Save**. Simpro shows the access token. **COPY IT NOW** into a private note. Simpro shows it only once.

WARNING. Treat the access token like your password. Never email it, never paste it in group chat, never include it in screenshots. Send it only to IT (Tayfun / Sinan), and only via direct message.

Part 2 - Send your Simpro API key to IT

In a direct message (not a group chat) to IT, send:

```
Hi, here is my Simpro API key for the Claude tool: <paste token here>.  
I work in: Plumbing only / Energy only / both
```

IT will reply with a personal access token starting with **smcp_**. The two URLs you need are:

Plumbing URL: <http://192.168.88.113:3001/mcp/plumbing>

Energy URL: <http://192.168.88.113:3001/mcp/energy>

NOTE. Why two tokens? Your **Simpro API key** stays on the office server (IT registers it for you). Your **personal access token** (the smcp_ one) is what your Claude Desktop sends to prove it is really you. If you change PCs, IT just gives you a new personal token without touching Simpro.

Part 3 - Add the connectors to Claude Desktop

1. Open **Claude Desktop**.
2. Click your profile icon (bottom-left) -> **Settings**.
3. Click **Connectors** in the left sidebar -> scroll to **Add custom connector**.
4. Add the FIRST connector for Plumbing:
 - **Name:** Goldman Plumbing
 - **Remote MCP server URL:** <http://192.168.88.113:3001/mcp/plumbing>
 - **Authentication:** Bearer token = the smcp_ token IT sent you
 - Click **Add**.
5. Add the SECOND connector for Energy (only if you work in Energy too):
 - **Name:** Goldman Energy
 - **Remote MCP server URL:** <http://192.168.88.113:3001/mcp/energy>
 - **Authentication:** Bearer token = the same smcp_ token
 - Click **Add**.

Part 4 - Test it

In Claude Desktop, type:

```
Use Simpro Plumbing to test the connection.
```

You should see something like:

```
"Simpro connection OK. Base URL: https://goldmanplumbingservices.simprosuite.com, Company ID:  
4 ..."
```

Then try the other one (if you added it):

```
Use Simpro Energy to test the connection.
```

Should report **Company ID: 37**. If both work - you are set.

More things to try

- Use *Simpro Plumbing* to find customers named *Goldman*.

- Use *Simpro Plumbing* to show the 5 most recent jobs.
- Use *Simpro Plumbing* to list line items for purchase order [number].
- Use *Simpro Energy* to find supplier invoices from Reece in May 2026.

Safety - what is on and off by default

SAFETY. Writes (create / update) are off by default. Claude can read your Simpro data but cannot change anything. When you are ready, ask IT to enable writes for your token. Even then, every write requires you to say 'confirm true' and Claude will show you exactly what it will do before doing it.

Common problems and fixes

Problem	Fix
Claude Desktop does not show 'Add custom connector'	Your Claude plan likely does not support Custom Connectors. Ask IT for the individual setup (Plan B).
'Connection failed' or 'cannot reach server'	Check you are on office Wi-Fi or VPN. Try opening <code>http://192.168.88.113:3001/healthz</code> in your browser - you should see a small JSON response. If not, the server is down - tell IT.
'401 Unauthorized'	Your personal access token is wrong, expired, or revoked. Ask IT to regenerate it.
'403 Forbidden' or 'does not have access to energy'	Your token only allows one company. Ask IT to grant access to both.
Claude finds zero quotes for a customer that clearly has quotes	Phrase the request as <i>'find quotes for customer X'</i> rather than putting the name as a keyword.
Anything else	Send IT a screenshot. Never include your access token in the screenshot - blur it first.

If anything is unclear

Contact IT (currently **Tayfun / Sinan**). Tell them which step you got stuck on, the exact error, and your Windows version. **Never include your tokens** in screenshots - blur or crop first.
